

AI TRAVEL ASSISTANT

Developer Handoff Brief

PANA — Tu compañero de viaje inteligente

Version 1.0 · Prepared for developer handoff

Includes: PRD summary · Milestone plan · Knowledge base · Catalog data · Personality spec

PROJECT OVERVIEW

What We're Building

We are building an AI-powered conversational travel assistant that operates as a knowledgeable local friend for travelers visiting Venezuela. The assistant's core channel is WhatsApp, with a web chat fallback. It combines a large language model (currently Llama 3.3 70B via Groq) with a curated RAG knowledge base of verified Venezuelan destinations, operators, and experiences.

The assistant is not a generic chatbot. It has a fixed Venezuelan cultural personality, adapts its tone and language based on the user's origin and phone prefix, and switches into a strict emergency mode when safety keywords are detected in any of the 6 supported languages.

CURRENT STATUS

Demo Progress & What Works

A working demo has been deployed and tested. The following has been validated:

- Llama 3.3 70B via Groq running with real-time AI responses
- RAG knowledge base loaded with initial catalog data (Roraima, Pico Bolívar, Autana Tepuy, Cascada 7 Pisos, El Guía Tour, Bequevé)
- Country dropdown switching (Venezuela +58, USA +1, Brazil +55, etc.) showing tone shift
- Emergency mode triggering on keywords like 'EMERGENCIA me robaron'
- Destination detail pages with shareable URL links (e.g. pana.app/roraima)

Known issues to fix before Milestone 1: (1) LLM hallucinating facts outside RAG — e.g. incorrectly stated Teleférico de Caracas is closed. Fix: tighten system prompt so PANA only states facts from catalog; for general info uses hedged language ('you might want to check'). (2) Session memory dropping context mid-conversation — already confirmed built, needs bug fix and timeout extension.

MILESTONE PLAN

Delivery Schedule

Two milestone delivery structure agreed. All times are Mexico City time (CST).

Day 1	Milestone 1 First milestone — client tests on WhatsApp
Day 2	Milestone 2 Feedback incorporated — presentation-ready

Day 1 Deliverables (Milestone 1)

- WhatsApp fully working via Twilio sandbox — end-to-end conversational flow
- Destination catalog pages live with shareable links (pana.app/[slug])
- Response length tuned: short teaser + link, not long text dumps in WhatsApp
- System prompt tightened: confident on catalog only, hedged on general info
- Language preference flow for non-Spanish numbers (+1, +44, +49, etc.)
- Session memory verified and working — last 10 exchanges persisted, 2h timeout
- .zip travel partner data processed and loaded into RAG

Day 2 Deliverables (Milestone 2)

- All Day 1 feedback incorporated
- Session memory bulletproof — no context drops within conversation
- Full travel partner catalog loaded and verified
- Clean Docker deployment ready for handover
- Full IP transfer: all code, prompts, configs, and data pipelines

Final Delivery (5–6 working days from kickoff)

- Production-ready deployment with own Twilio account
- Complete documentation: README, .env.example, architecture diagram
- Open source model stack confirmed (Llama 3 / Mistral — no proprietary lock-in)
- LLM layer architected for easy swap to self-hosted model

ASSISTANT PERSONALITY

PANA — The Local Friend

The assistant's personality is fixed in the system prompt and cannot be overridden by users. It represents a warm, knowledgeable Venezuelan local who is proud of their country and genuinely invested in giving travelers the best experience possible.

"Think of the 'paisa' friend who knows every corner of Medellín, or the 'chilango' who knows exactly where to eat in CDMX — but Venezuelan. Warm, street-smart, proud of where they're from, and genuinely helpful."

Attribute	Specification	Context
Name	PANA — always. Never 'assistant', never 'bot'.	Fixed in system prompt
Base tone	Warm, close, helpful, light humor. Never cold or corporate.	All channels
Slang (ES-VE full mode)	chamo, pana, chévere, ¡dale!, está brutal — used naturally, never forced.	WhatsApp & App (informal)
Slang (ES-VE careful mode)	Venezuelan warmth without heavy slang. Still clearly local.	Kiosk & formal contexts
Emojis	Moderate, strategic. ████████. Max 2 per message. Zero in emergency mode.	All channels
Scope	Venezuela only. If asked about other destinations: redirects warmly.	Hard rule
Limits	No politics, no negative commentary on country situation, no unverified safety claims.	Hard rule

LANGUAGE & TONE LOGIC

Detection and Adaptation Rules

Language is detected from the first message. Once set, it persists for the full session unless the user explicitly requests a change.

Detected Case	Behavior	Language Rule
Spanish + +58 (Venezuela)	Welcomes in Venezuelan Spanish. Asks: full slang or neutral?	Respects choice for full session

Spanish + other LATAM prefix (+57, +52, +54, +34...)	Welcomes in neutral Spanish. Asks tone preference.	Neutral or Venezuelan per choice
Spanish + no clear prefix	Neutral Spanish by default. Adapts by context.	No assumption
+1, +44, +49 and other non-Spanish prefixes	Asks: 'English or Venezuelan Spanish?' before proceeding.	Stores choice in session
English detected	Responds in English throughout. Venezuelan warmth in English.	Never switches without request
Portuguese (Brazil)	Responds in Brazilian Portuguese throughout.	PT-BR natural register
Italian	Responds in Italian throughout.	Standard Italian
French	Responds in French throughout.	Standard French
German	Responds in German throughout.	Clear, accessible German
Unsupported language	Responds in English. Lists the 6 supported languages.	Fallback to English

Emergency mode override: When safety keywords are detected in ANY language ('help', 'ayuda', 'emergencia', 'Notfall', 'soccorso', 'au secours', 'socorro'), PANA switches immediately to direct, no-emoji, no-slang mode regardless of current language or register. Returns relevant emergency contacts for the region.

KNOWLEDGE BASE

Two-Tier Information Architecture

The knowledge base operates on two tiers to balance accuracy with usefulness:

TIER	TYPE	PANA BEHAVIOR	SOURCE
Tier 1	Curated catalog	Recommends directly and confidently. Sends catalog link. Never hedges.	Operator .docx files + .zip data
Tier 2	General destination info	Uses hedged language: 'I've heard...', 'you might want to check...'. Never states as verified fact.	General LLM knowledge — clearly flagged

Catalog Link Pattern

When PANA recommends a Tier 1 destination, it sends a short teaser + link — not a long message dump. Example:

"Chamo, el Roraima es una locura – 6 días subiendo uno de los tepuyes más antiguos del planeta. Aquí están todos los detalles: [pana.app/roraima](#) ■"

WhatsApp UX Constraint

Long messages are ignored on WhatsApp. The system prompt must enforce: give a 1-2 sentence teaser and link. Full details live on the catalog page. This is a config change, not a code change — tunable via system prompt and max_tokens parameter.

CURRENT CATALOG

Verified Operators — From .zip Files

The following operators are extracted from the provided .zip files and ready to be loaded into the RAG knowledge base. All data is from official operator-submitted documents.

Operator / Experience	Category	Description	Contact
Cruz de Bolívar — Cascada 7 Pisos	Tour Operator	2-day trip: waterfall, Playa Colorada, Mochima. Transport, 2 lunches, 1 breakfast, lodging, guide included. Departs early from Altamira.	@cruzdebolivar · 04249323867
Cruz de Bolívar — Autana Tepuy	Tour Operator	8-day Amazon expedition: Orinoco, Sipapo & Autana rivers, Lago Leopoldo, Cerro Wajari summit, indigenous communities. All inclusive.	@cruzdebolivar · 04249323867

Cruz de Bolívar — Roraima	Tour Operador	6-day trek to Roraima summit, Gran Sabana. A/C transport, guides, cook, full camping gear, permits. Departs Ciudad Bolívar / Puerto Ordaz.	@cruzdebolivar · 04249323867
Uro Adventure — Pico Bolívar	Aventura / Ecoturismo	2-day high-altitude climb to Venezuela's highest peak. Certified guides, full gear, camping at Casa Domingo Peña, Inparques permits, radio comms.	@uro.adventure · 04126002268
El Guía Tour — Centro Histórico Caracas	Tour Operador	3.5h free tour (pay-what-you-feel) of 19th-century afrancesado Caracas: Basílica Santa Teresa, Teatro Municipal, Plaza Bolívar, Panteón Nacional.	@elguiatour · 04244149933
El Guía Tour — El Calvario	Tour Operador	3.5–4h heritage walk through El Calvario park: monuments, mirador, Capilla Nuestra Señora de Lourdes, Arco Federación. Minimum 10 reservations.	@elguiatour · 04241879097
Bequevé — Los Roques	Hospedaje	All-inclusive posada 50m from the sea, designed by architect Fruto Vivas. Breakfast, lunch, dinner, snorkel gear, excursions to cayos included.	@posadabequeve · 0412-2972587
Bequevé — Choroní	Hospedaje	Colonial-style lodge in Puerto Colombia, Sector Dos Ríos. Breakfast, merienda, dinner, national drinks included. Minimum double occupancy.	@posadabequeve · 0412-2972587

Additional unstructured data from travel partner is provided in the accompanying .zip files. Parse, normalize, and load all operator entries following the same schema.

TECHNICAL SPECIFICATIONS

Stack & Architecture

Layer	Current Implementation	Requirement / Constraint
LLM	Llama 3.3 70B via Groq (current demo)	Must be swappable to self-hosted open source (Ollama + Llama 3 / Mistral). No proprietary lock-in.
RAG / Vector Search	pgvector or Chroma	Lightweight for demo. Pinecone free tier acceptable.
Backend	FastAPI (Python)	Confirmed from developer's current implementation.
WhatsApp	Twilio sandbox (demo) → own Twilio account (final)	Venezuela +58 not available on Twilio. Use +1 for demo, then +52 MX or +57 CO for production.
Catalog pages	Lightweight FastAPI-hosted pages	Each operator gets a slug (pana.app/oraima). Photos, description, contact, pricing.
Session memory	Persistent per-user session	Last 10 exchanges + detected language + register preference. 2h timeout minimum.
Deployment	Docker Compose	Clean Docker delivery for final handover.
Frontend fallback	Web chat UI	Branded: teal #009688 / navy #1A2B4A. Logo and assets provided separately.

IP & OPEN SOURCE

Intellectual Property & Model Requirements

- **Full IP transfer:** All code, prompts, configurations, data pipelines, and catalog pages are transferred to the client upon delivery. No exceptions.
- **No black boxes:** No proprietary frameworks or vendor-locked components that cannot be inspected, modified, or handed to another developer.
- **Open source first:** Final architecture must use open source models (Llama 3, Mistral, or equivalent via Ollama). Commercial APIs (Groq, OpenAI) acceptable for demo only.
- **LLM layer swap:** The LLM provider must be swappable via environment variable — not hardcoded. Switching from Groq to self-hosted Ollama should require only a config change.
- **NDA:** All project details, client identity, destination, and operator data are confidential. NDA required before project start.

This document is shared for development handoff purposes. It contains confidential project details, real operator data, and proprietary personality specifications. Do not distribute. All code, prompts, and deliverables produced under this project are subject to full IP transfer to the client upon delivery.
